

In accordance with 37 C.F.R. §1.121, a claim listing including the status and text of all claims as currently presented appears below.

LISTING OF CURRENTLY PENDING CLAIMS

1. (CURRENTLY AMENDED) A method of making a mounting patch for mounting an electronic assembly to the inner liner of a pneumatic tire, the method comprising the steps of:

providing a power source;

coupling at least one pair of connecting terminals to the power source;

embedding the power source and at least a portion of at least one of the connecting terminals into a quantity of uncured rubber; ~~and~~

curing the uncured rubber by applying sufficient heat and pressure to the uncured rubber such that the power source and at least a portion of at least one of the connecting terminals are secured in the rubber, and

~~whereby coupling an electric~~ electronic tire monitoring assembly may be coupled to the pair of connecting terminals outside the cured rubber.

2. (ORIGINAL) The method of claim 1, wherein said step of providing comprises providing at least one battery as the power source.

3. (ORIGINAL) The method of claim 1, wherein said step of providing comprises providing a pair of batteries as the power source.

4. (ORIGINAL) The method of claim 1, further comprising the step of:

applying an adhesive layer on selected portions of the power source prior to the step of embedding.

5. (ORIGINAL) The method of claim 1, further comprising the step of:

applying a non-conductive adhesive layer on selected portions of the power source prior to the step of embedding.

6. (ORIGINAL) The method of claim 1, further comprising the steps of:
providing an antenna element; and
embedding the antenna element into the quantity of uncured rubber.
7. (ORIGINAL) The method of claim 6, further comprising the step of:
applying an adhesive layer to selected portions of the antenna element prior to the step of embedding the antenna into the quantity of uncured rubber.
8. (ORIGINAL) The method of claim 6, further comprising the step of:
applying a non-conductive adhesive layer to selected portions of the antenna element prior to the step of embedding the antenna element into the quantity of uncured rubber.
9. (ORIGINAL) The method of claim 6, further comprising the step of shaping the antenna element with undulations prior to embedding into the quantity of uncured rubber whereby the undulations allow longitudinal stretching of the antenna element.
10. (ORIGINAL) The method of claim 9, further comprising the step of:
applying a non-conductive adhesive layer to selected portions of the antenna element prior to the step of embedding the antenna element into the quantity of uncured rubber.
11. (ORIGINAL) The method of claim 1, further comprising the steps of:
providing a conductive element; and
embedding the conductive element into the quantity of uncured rubber.

12. (ORIGINAL) The method of claim 11, further comprising the step of:

applying a non-conductive adhesive layer to selected portions of the conductive element prior to the step of embedding the conductive element into the quantity of uncured rubber.

13. (ORIGINAL) The method of claim 11, further comprising the step of selecting the conductive element to be provided from the group consisting of springs, fatigue-resistant metals, and elastomers.

14. (CURRENTLY AMENDED) A method of providing a pneumatic tire with a mounting patch for mounting a monitoring device for monitoring conditions of the pneumatic tire comprising the steps of:

providing a pneumatic tire;

providing a power source;

coupling at least one pair of connecting terminals to the power source;

embedding the power source and at least a portion of at least one of the connecting terminals into a quantity of uncured rubber;

curing the uncured rubber by applying sufficient heat and pressure to the uncured rubber such that the power source and at least a portion of at least one of the connecting terminals are secured in the rubber; and

securing the cured rubber to the pneumatic tire, and

whereby coupling an electric electronic tire monitoring assembly may be coupled to the pair of connecting terminals outside the cured rubber.

15. (ORIGINAL) The method of claim 14, wherein said step of providing a power source comprises providing at least one battery.
16. (ORIGINAL) The method of claim 14, wherein said step of providing a power source comprises providing a pair of batteries.
17. (ORIGINAL) The method of claim 14, further comprising the step of:
applying an adhesive layer to selected portions of the power source prior to the step of embedding.
18. (ORIGINAL) The method of claim 14, further comprising the step of:
applying a non-conductive adhesive layer to selected portions of the power source prior to the step of embedding.
19. (ORIGINAL) The method of claim 14, further comprising the steps of:
providing an antenna element; and
embedding the antenna element into the quantity of uncured rubber.
20. (ORIGINAL) The method of claim 19, further comprising the step of:
applying an adhesive layer to selected portions of the antenna element prior to the step of embedding the antenna into the quantity of uncured rubber.
21. (ORIGINAL) The method of claim 19, further comprising the step of:
applying a non-conductive adhesive layer to selected portions of the antenna element prior to the step of embedding the antenna element into the quantity of uncured rubber.

22. (ORIGINAL) The method of claim 19, further comprising the step of shaping the antenna element with undulations prior to embedding into the quantity of uncured rubber whereby the undulations allow longitudinal stretching of the antenna element.

23. (ORIGINAL) The method of claim 22, further comprising the step of:
applying a non-conductive adhesive layer to selected portions of the antenna element prior to the step of embedding the antenna element into the quantity of uncured rubber.

24. (ORIGINAL) The method of claim 14, further comprising the steps of:
providing a conductive element; and
embedding the conductive element into the quantity of uncured rubber.

25. (ORIGINAL) The method of claim 24, further comprising the step of:
applying a non-conductive adhesive layer to selected portions of the conductive element prior to the step of embedding the conductive element into the quantity of uncured rubber.

26. (ORIGINAL) The method of claim 24, further comprising the step of selecting the conductive element to be provided from the group consisting of springs, fatigue-resistant metals, and elastomers.
